No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 2; Length 239;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 44, Application US/09934289A

Patent No. 6852837

GENERAL INPORMATION:

APPLICANT: Busicial Samantha J.

TITLE OF INVENTION: NOVEL MOLECULES OF THE

TITLE OF INVENTION: HERPENSYLRUS-ENTRY-MEDIATOR-RELATED

TITLE OF INVENTION: PROTEIN FAMILY AND USES THEREOF

FILE REFERENCE: MBIO98-061CP1CN1 (M)

CURRENT PELING DATE: 2001-08-21

PRIOR FILING DATE: 1999-06-29

PRIOR FILING DATE: 1999-06-39

NUMBER OF SEQ ID NOS: 58

SOFTWARE: FRELEE 1998-09-03

NUMBER OF SEQ ID NOS: 58

Sequence 4, Application US/09814292

Sequence 4, Application US/09814292

Patent No. US20020120117A1

GENERAL INFORMATION:

APPLICANT: YU, De-Choo

APPLICANT: Alang, Hong

APPLICANT: Alang, Hong

APPLICANT: Henderson, Daniel R.

TITLE OF INVENTION: HUMAN UROTHELIAL CELL SPECIFIC UROPLAKIN

TITLE OF INVENTION: WETANSCRIPTIONAL REGULATORY SEQUENCES, AND

TITLE OF INVENTION: METHODS OF USE THEREOF

TITLE OF INVENTION: METHODS OF USE THEREOF

TITLE REPERRENCE: 340022001500

CURRENT APPLICATION NUMBER: US/09/814,292

CURRENT FILING DATE: 2001-10-12
                                                                                                                                                                                                                                                                                                                                                                       APPLICANT: Yu, De Chao

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

T48284
Typethetical protein T22P11.220 - Arabidopsis thaliana
C.Species: Arabidopsis thaliana (mouse-ear cress)
C.Date: 20-Apr-2000 #sequence_revision 20-Apr-2000 #text_change 09-Jul-2004
C.Accession: T48284
R.Bevan, M.; Hilbert, H.; Braun, M.; Holzer, E.; Brandt, A.; Duesterhoeft, A.; Bancroft, submitted to the Protein Sequence Database, April 2000
A,Reference number: Z24490
A,Reference number: Z24490
A,Status: preliminary
A,Molecule type: DNA
A,Residues: 1-428 <BEV>
A,Residues: 1-428 <BEV>

CDNA Library Preparation: DOE Joint Genome Institute:

http://www.jgi.doe.gov

DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov

Naming Conventions: EST name is generated by the concatenation of

the JGI Clone Id and the direction of sequencing. The suffix 'rev'

indicates a reverse sequencing read of the insert. It does not

necessarily reflect the orientation of the insert. It does not

Poly.A. Based upon the presence of a run of 14 or more T residues

at the beginning of the sequence, this clone was polyadenylated.

The resulting Poly-T sequence has been removed.
